

# NEWLY REDESIGNED FILTRATION SYSTEM

Introducing Ruwac's MicroClean filtration system for improved performance and increased productivity. Our new filtration assembly for dry material allows filters to stay cleaner longer with less built up debris, resulting in reduced maintenance and fewer replacements.

- External shaker system quickly releases filter cake, restoring filter efficiency and air flow.
- Innovative design keeps filter integrity intact to ensure dust-free operation and dustless work environments.
- Cleaner work environments protect workers' health from dust irritants.
- Fewer filter replacements means lower costs and less maintenance.
- New dry-material filter assembly is included with all new vacuums and is available as an upgrade for any existing portable machine for dry pickup.

## EXPERIENCE MICROCLEAN FILTRATION

Low loading, MicroClean Filters are 99.99% efficient at .5 micron. In sizes of 13 and 28 ft<sup>2</sup>, these filters offer maximum filtration area in the most compact size.
